TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, SQL, HTML5, CSS3, C++, C/C#

Front end: React, Vite, Tailwind CSS, GSAP, Zustand, Bootstrap 5

Back end: Node.js, Spring Boot, Spring Data JPA/Hibernate, REST APIs, Apache Maven, MySQL, SSIS

AI tools: Claude AI, Google Gemini, Junie AI, CodeRabbit

Tools & cloud: TortoiseGit (Git), Docker, AWS, Postman, VS Code

EXPERIENCE

Web Developer, Petite Estates

Jun 2025 – Aug 2026

- Partnered with business stakeholders to translate internal requirements into technical designs and consolidate expectations into technical writing.
- Developed object-oriented backend services in Java and Spring Boot, writing clean, maintainable code to realize system designs for web-based database applications.
- Built an internal front-facing website in React, TypeScript, HTML5, and CSS3, designing user interfaces that improved usability and interface functionality for staff.
- Improved the speed and efficiency of SQL-based management reports by 25%.
- Automated data gathering and scheduled report delivery using SSIS, eliminating recurring manual reporting work.
- Designed test procedures and debugged applications against established internal standards prior to delivery, documenting work to meet compliance and project requirements.

PROJECTS

Portfolio Website | React, GSAP, Tailwind CSS, Zustand, Junie AI

Aug 2026 - Present

- Built a desktop-style portfolio in React and Tailwind CSS where visitors open apps from an animated dock into draggable, resizable windows; deployed on GitHub Pages.
- Managed window state (open, focused, stacking order) globally with Zustand, and wrapped each app window in a reusable Higher-Order Component, so every window shares the same behavior.
- Animated the dock's hover magnification and window transitions with GSAP.

Student Management System | Java, Spring Boot, Hibernate, MySQL, AWS

Aug 2026 - Present

- Built a Java backend and RESTful API with Spring Boot and Spring Data JPA (Hibernate), implementing CRUD operations and MySQL integration for student, course, and grade records.
- Tested POST, GET, PUT, and DELETE requests in Postman with JSON to create, read, update, and delete records.
- Designed the relational MySQL schema and enforced data integrity constraints across courses and grades.
- Deployed and hosted the application on AWS, managing data structures and tuning for production-level performance.

Thuytiepie Hotel Management Database | MySQL, Database Systems

Feb 2026 - May 2026

- Produced a technical design for a hotel management database, authoring select, update, and delete scripts to exercise full system functionality.
- Eliminated transitive dependencies to achieve Third Normal Form, preventing deletion anomalies and ensuring a maintainable, high-quality data architecture.

EDUCATION

Bachelor of Science in Computer Science

Expected December 2026

University of Houston – Downtown
